## 5 OUTREACH OPENERS

- We picked up a flaring activity spike in the marcellus basin on 2026-06-08.
- Stranded energy in marcellus is monetizable on-site: flexible offtake (power gen, compute, compression) converts what EQT currently writes off into margin, without waiting on pipeline or grid buildout.
- As Executive Vice President Operations, J.E.B. Bolen owns exactly this trade-off. Open with the specific dates and the basin above, not a generic pitch; the wedge is that you know when and where it happened.
